

2021 Reporting Year - eCQM Specifications - Known Issues Log

| Issue ID | Status | Measure(s) Impacted | Type | Issue Description | Impact | Resolution | Related Issue |
|----------|----------|---------------------|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| ECQMP-64 | Resolved | ePC01 | Logic; Measure Package | Due to an underlying MAT tool error, when the population level definition "Delivery Encounter Near Term" was used to define the Denominator, the "Delivery Encounter With Calculated Gestational Age" definition did not display in the human readable file. Therefore, the following union clause is used in the Denominator: "Delivery Encounter With Calculated Gestational Age" union "Delivery Encounter With Estimated Gestational Age Assessment" | Measure package is executable in Bonnie. Impact is limited to html file at present. See BonnieMAT-646 related issue. | Production MAT 5.91 release June 16, 2020 resolved this issue. All definitions used in the measure are now included in Human Readable output. Denominator is now defined as "Delivery Encounter Near Term". | BONNIEMAT-646 |
| ECQMP-4 | Resolved | ePC01 ePC02 | Value Set | Due to the licensing requirement of the Value Set Authority Center (VSAC), The Joint Commission is not able to provide the code concepts for the measure value sets. | No value set program release is available | 1. VSAC provides an API call to retrieve value sets using expansion set: 20200612. See VSAC API CALL related issue. 2. See XML Education in value set zip file. | VSAC API CALL |
